

ANNUAL REPORT 2022

BACK TO BUSINESS

In an era marked by conservation challenges, the Mohamed bin Zayed Species Conservation Fund exemplifies how targeted support can ignite substantial change. Our small grants empower conservationists to innovate, engage communities, and protect biodiversity. These efforts are not just financial aids but catalysts for resilience against habitat loss, climate change, and more, demonstrating the profound impact of strategic, grassroots action.

FOREWORD

In an era marked by conservation challenges, the Mohamed bin Zayed Species Conservation Fund exemplifies how targeted support can ignite substantial change. Our small grants empower conservationists to innovate, engage communities, and protect biodiversity. These efforts are not just financial aids but catalysts for resilience against habitat loss, climate change, and more, demonstrating the profound impact of strategic, grassroots action.

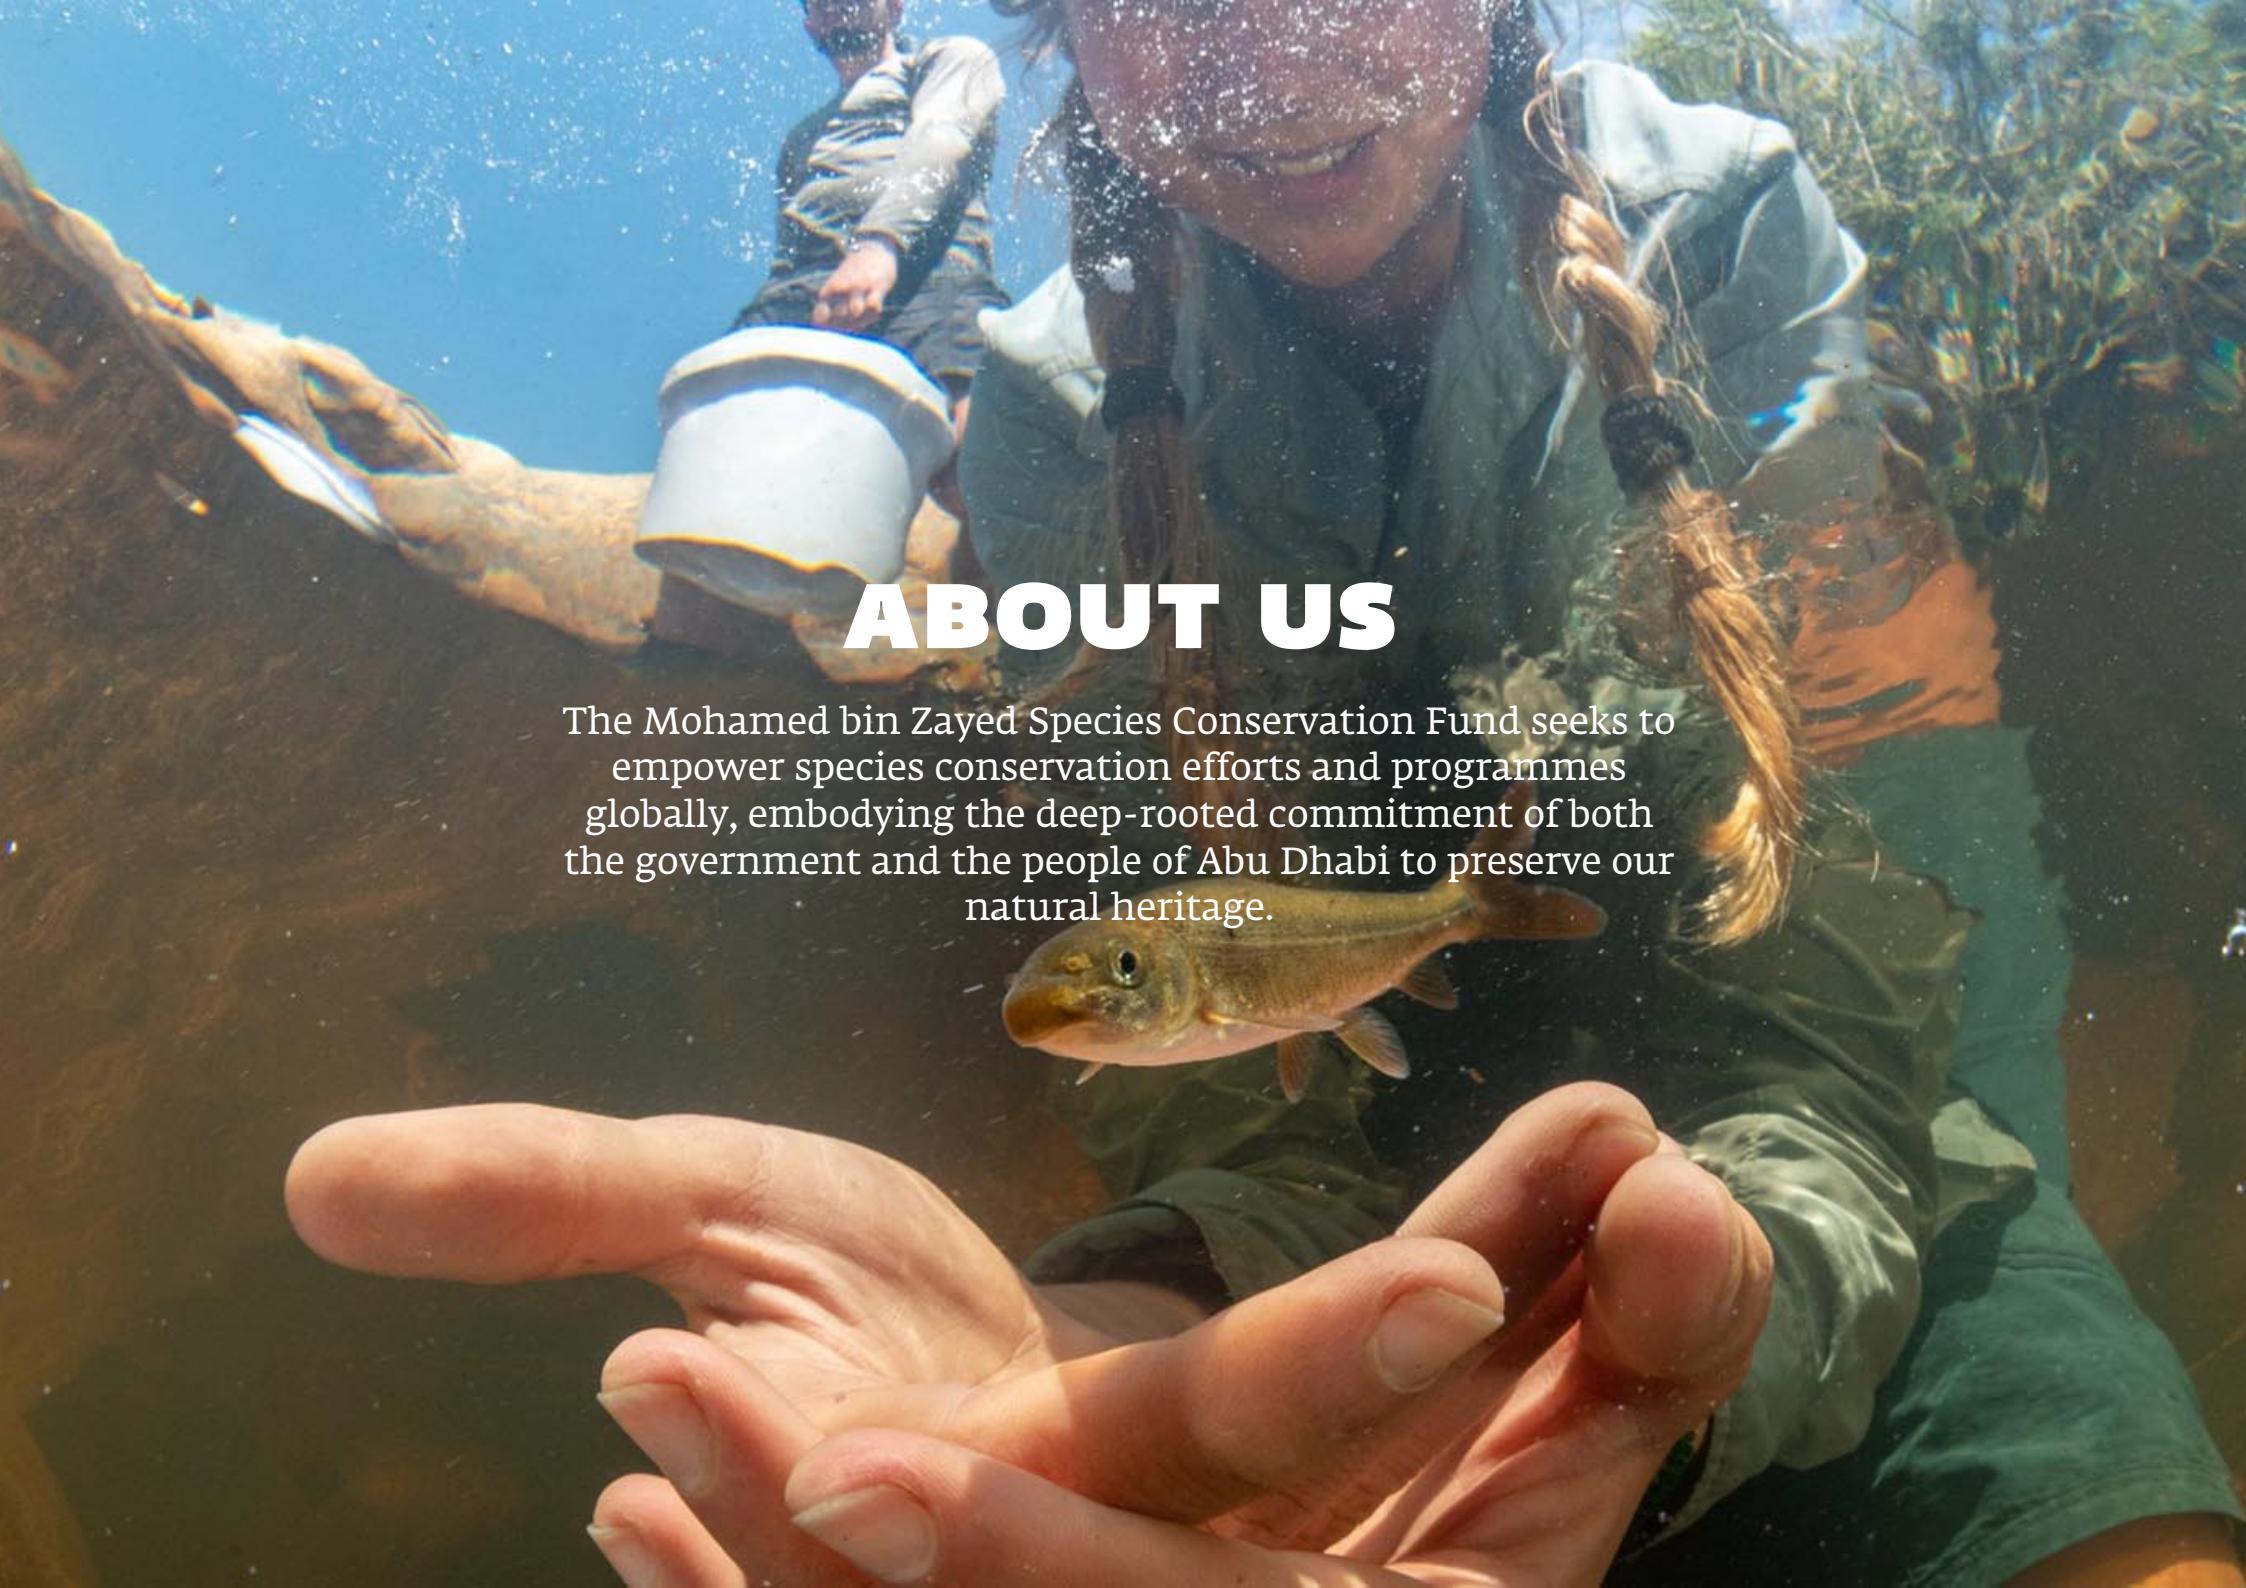

As an added endorsement of our commitment to integrating climate and nature conservation, I was honored to be appointed as the UN Climate Change High-Level Champion for COP28. This role underscores the intrinsic link between climate action and the preservation of biodiversity, highlighting the mutual benefits of addressing these global challenges in tandem.

I am deeply honored to carry the responsibility of supporting the COP28 UAE Presidency in this capacity. The environment, with its climate and biodiversity, is a cornerstone of the UAE's culture and identity, recognized as essential for well-being. In my dual roles as UN Climate Change High-Level Champion for COP28 and IUCN President, I am committed to pushing beyond conventional approaches to prioritize nature-based solutions that can harmonize climate and biodiversity objectives.

The interconnectedness of climate change and biodiversity is undeniable. With the support of over 10,000 conservationists, biologists, ecologists, field workers, and volunteers on the ground, the MBZ Fund is uniquely positioned to lead conservation efforts. Our approach demonstrates that through focused, strategic actions, even small-scale funding can yield significant contributions to the global conservation effort.

RAZAN AL MUBARAK
MANAGING DIRECTOR

A photograph of a person's hands holding a small, brown fish. In the background, a woman with long hair is smiling and looking at the fish. The scene is set outdoors, with sunlight reflecting off the water.

ABOUT US

The Mohamed bin Zayed Species Conservation Fund seeks to empower species conservation efforts and programmes globally, embodying the deep-rooted commitment of both the government and the people of Abu Dhabi to preserve our natural heritage.

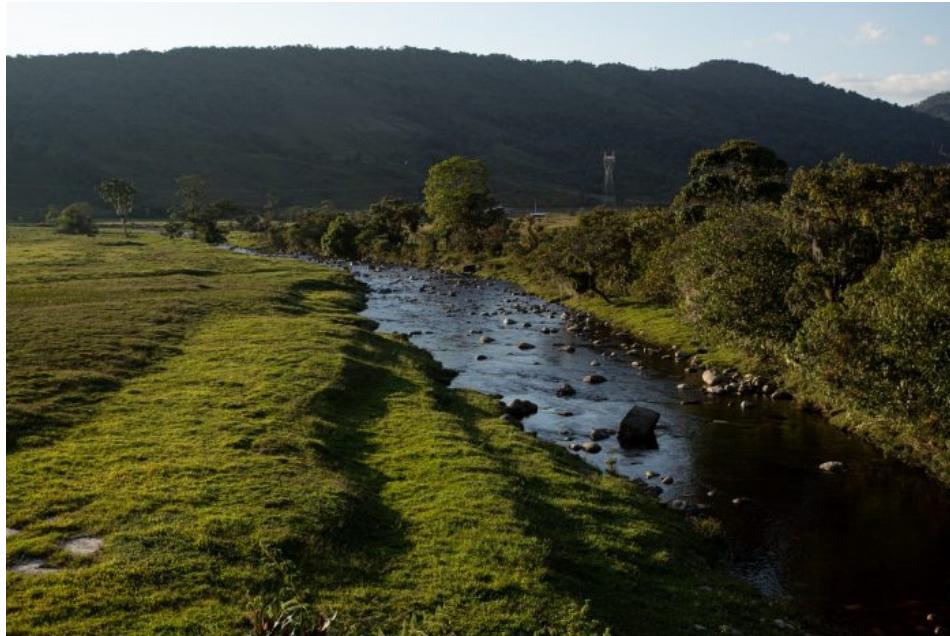

WHY SPECIES CONSERVATION?

Animals, fungi, and plants are essential components to sustain a prosperous ecosystem. Conserving a well-balanced ecosystem maintains the health of the environment ensuring humans have access to clean air and water, fertile land, and plants with medicinal properties. When a species becomes endangered, it disrupts the ecosystem and can have devastating, often far-reaching consequences for the well-being of all inhabitants on our beautiful planet.

In a recent UN report, it was highlighted that around 1 million animal and plant species are now threatened with extinction, many within decades, more than ever before in human history.

Kingfisher © WCS

The average abundance of native species in most major land-based habitats has fallen by at least 20%, mostly since 1900. More than 40% of amphibian species, almost 33% of reef-forming corals and more than a third of all marine mammals are threatened.

The picture is less clear for insect species, but available evidence supports a tentative estimate of 10% being threatened. At least 680 vertebrate species had been driven to extinction since the 16th century and more than 9% of all domesticated breeds of mammals used for food and agriculture had become extinct by 2016, with at least 1,000 more breeds still threatened.

It's time to rethink our relationship with nature. Not for us, but for our children and their children. Let's leave the world a better place.

SMALL GRANTS

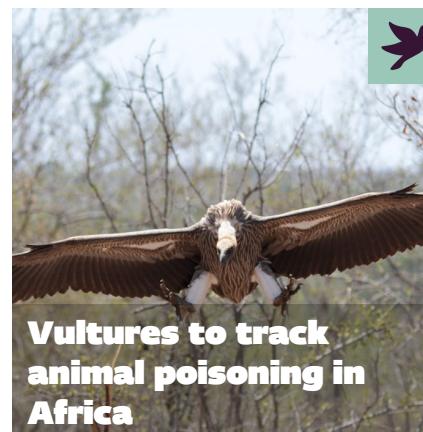

The Mohamed bin Zayed Species Conservation Fund provides financial support in the form of small grants of less than \$25,000 to conservation projects worldwide. These small grants are as much for the species as they are for the conservationists and organizations working so passionately to protect them.

CASE STUDIES

While the Mohamed bin Zayed Species Conservation Fund supports a diverse range of species through direct funding and engagement with multi-partner conservation projects around the world, the species coverage and number of conservationists supported each year by its small grants programme is unparalleled.

Thousands of these small-scale species conservation projects have reached all corners of the globe, across all seven continents, offering targeted support to enthusiastic conservationists and researchers in the field.

These intrepid individuals and organisations are the first line of defense against species extinction – passionate people who have dedicated their lives to the conservation of the creatures and plants they love, and we depend on to retain our planet's unique biodiversity.

NEGATING ELEPHANT-HUMAN CONFLICT IN VIETNAM

Embracing new age technology to manage elephant-human conflict in Vietnam

Scientific name: *Elaphus maximus*

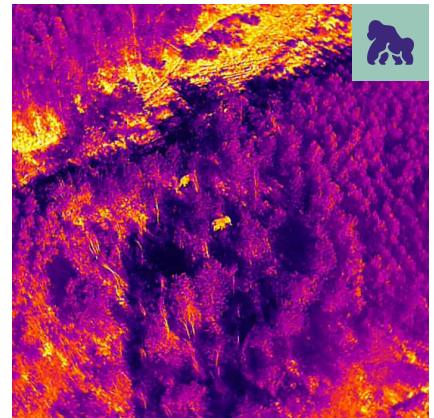

Common name: Asian Elephant

Species type: Mammal

Country: Vietnam

Website:

<https://reports.speciesconservation.org/ar-case-studies/modern-technology-to-manage-elephant-human-conflict-in-vietnam/>

FUNGI Reforestation in Benin

The Sudano-Guinean district of Benin is known as the home of the ectomycorrhizal fungi which was originally discovered in 2010.

Scientific name: *Russula cellulata*

Common name: Russulate fungi

Species type: Fungi

Country: Benin

Website: <https://reports.speciesconservation.org/ar-case-studies/fungi-forestation-in-benin/>

VULTURES TO TRACK ANIMAL POISONING IN AFRICA

Using vultures to track and combat wildlife poisoning on the African continent.

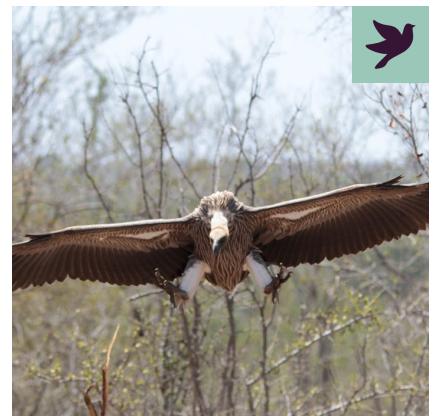

Scientific name: *Gyps africanus*

Common name: White-backed vulture

Species type: Bird

Country: South Africa

Website: <https://reports.speciesconservation.org/ar-case-studies/vultures-to-track-animal-poisoning-in-africa/>

BUILDING BARRIERS TO SAFEGUARD THE MOUNTAIN NYALA

Building barriers to protect the Mountain Nyala and prevent livestock from degrading their habitat.

Scientific name: *Tragelaphus buxtoni*

Common name: Ethiopian Mountain Nyala

Species type: Mammal

Country: Ethiopia

Website: <https://reports.speciesconservation.org/ar-case-studies/building-barriers-to-safeguard-the-ethiopian-mountain-nyala/>

SUSTENTATION OF THE CUBAN CAVE SCORPION

Research project to better understand Cuban cave scorpion behaviour.

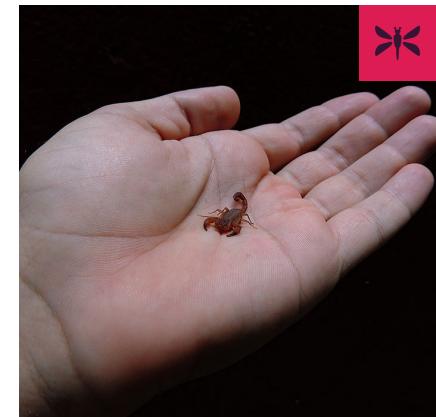

Scientific name: *Tityopsis sheylae*

Common name: Cave scorpion

Species type: Invertebrate

Country: Cuba

Website: <https://reports.speciesconservation.org/ar-case-studies/sustentation-of-the-cuban-cave-scorpion/>

PRESERVING A BLOOMING GOOD FIND; THE MALABAR RIVER-LILY

The endangered Malabar river-lily is flourishing again.

Scientific name: *Crinum malabaricum*

Common name: Malabar river-lily

Species type: Plant

Country: India

Website: <https://reports.speciesconservation.org/ar-case-studies/preserving-a-blooming-good-find-the-malabar-river-lily/>

PARTNER PROJECTS

Mubadala Investment Company, the Abu Dhabi-based sovereign investor, entered a three-year partnership with the MBZ Fund to support conservation initiatives around the world. Through the partnership, Mubadala Investment Company will provide the MBZ Fund with US \$1.5 million annually to be directed towards supporting endangered flora and fauna in Africa, Asia and South America.

MUBADALA INVESTMENT COMPANY GRANTS

MUBADALA

LARGE PROJECTS, SPONSORED BY MUBADALA

Mubadala Investment Company, the Abu Dhabi-based sovereign investor, has entered a three-year partnership with the Mohamed bin Zayed Species Conservation Fund (MBZ Fund) to support conservation initiatives around the world. Through the partnership, Mubadala Investment Company will provide the MBZ Fund with US \$1.5 million annually to be directed towards supporting endangered flora and fauna in Africa, Asia and South America; particularly in countries where Mubadala Investment Company has portfolio companies including Colombia, Guinea, Indonesia, Thailand – representing some of the world's biodiversity hotspots.

These grants, while larger in scope and longer in duration than the traditional MBZ Fund small grants programme, complement the MBZ Fund's already significant support for species conservation globally, and the Fund's policy of supporting hands-on, field conservation activities. These "Mubadala Grants" are implemented by our trusted and experienced local conservation partners, supported by Mubadala and its assets, and managed by the Mohamed bin Zayed Species Conservation Fund. All the partners in this effort are dedicated to conserving the species that form the building blocks of life on earth and by applying their passions for conservation will help turn the tides against the extinction crisis.

LARGE PROJECT STORIES 2022

LARGE PROJECTS IN GUINEA 2022

Mitigating threats to the African manatee, Atlantic humpback dolphin and marine turtles

The Guinean forests of West Africa are considered one of the world's 25 biodiversity hotspots and with many watercourses in the sub region, also considered the "Water Tower of West Africa". It has one of the most dynamic coastal areas in the sub-region and has a highly productive marine ecosystem.

LARGE PROJECTS IN COLOMBIA 2022

From forests to rivers: Finding some of Colombia's most endangered species

Situated in north-western South America on the Tumbes-Chocó-Magdalena and Tropical Andes Biodiversity Hotspots, Colombia is one of the world's 17 megadiverse countries and home to an astonishing 10% of all biodiversity on earth.

[View Full Story](#)

LARGE PROJECTS IN INDONESIA 2022

From forest to coast: Conserving Indonesia's threatened felids and sea turtles

Indonesia spreads across almost 18,000 islands. Whilst these only represent one percent of the world's land area, remarkably their rainforests are home to 10 percent of the world's known plant species, 12 percent of all mammal species and 17 percent of all known bird species.

LARGE PROJECTS IN THAILAND 2022

From stream to shore: Conservation of riverine species and wintering shorebirds

Thailand ranks the 20th among countries globally in terms of the rate of biodiversity, but as many as 470 species around the country are facing the threat of extinction in the wild. Almost 20% of its land area and five percent of its total marine coastal area are protected.

PHILANTHROPY

The MBZ Fund manages a portfolio of Abu Dhabi's philanthropic interests related to species conservation that extends across the world and different species.

PANTHERA

Since its founding in 2006, Panthera's wild cat conservation projects across all continents, have had the unique opportunity to experience the abundant richness of the geographical landscapes that wild cats inhabit as well as the culture and heritage of the Indigenous Peoples and Local Communities that live alongside these iconic wild cat species.

Decades of wild cat biology studies at Panthera have definitively identified wild cats, especially big cats, as indicators of the health of our planets' biodiversity. Their work has also shown that there is significant overlap of the wild cat territories that they study, with traditionally held territories of indigenous peoples who are intergenerational caretakers of these global climate-crucial landscapes.

In partnership with Panthera, the Mohamed bin Zayed Species Conservation Fund develop and manage a customized small-grants mechanism, designed to engage with Indigenous organizations to protect biocultural diversity in critical landscapes, and participate actively in the protection of wild cat conservation.

Accomplishments include:

- Building the **Tigers Forever** Protocol, which has helped tiger populations rebound in key sites across India and Nepal and is turning the tide against poachers in Southeast Asia.
- Spearheading the **Jaguar Corridor Initiative** to protect critical jaguar habitat across 18 countries and keep jaguar

Tiger (Russia) © John Goodrich/Panthera

populations connected (and genetically diverse) from northern Mexico to northern Argentina.

- Advancing wildlife technology with our revolutionary **PoacherCams** that help to catch poachers in real-time.
- Forging an extraordinary alliance between **six Indigenous tribes** and state and national government agencies to preserve pumas and bobcats in Washington State.
- Formulating a comprehensive strategy to study and conserve the **33 species of small cats**.

Our impact can also be measured by the growth of other local wildlife species, the economic opportunities and benefits our projects provide to local communities, the reduction of incidents of crime and wildlife part trafficking in and around protected areas and the number of people who join our movement. Protecting cats provides a host of ecosystem and community benefits, from the maintenance of key watersheds to the creation of ecosystem industry jobs.

FINANCIALS

The financial reporting of the Mohamed bin Zayed Species Conservation Fund focuses on the performance of its endowment, as well as the reporting of an independent auditor who ensures compliance with financial standards set by the government of Abu Dhabi.

ENDOWMENT

The endowment

The endowment of the Mohamed bin Zayed Species Conservation Fund was created in April 2009, with an initial allocation of \$27.5m. Since then, it has been managed in such a way as to provide for the financial needs of the small grants programme in perpetuity.

The long-term objective of the endowment, as described in its Investment Policy Statement, is:

- to make annual distributions for the benefit of species conservation, in accordance with the MBZ Fund's spending rule;
- to preserve the capital in US dollars over a 10-year time horizon; and, to the extent that these two objectives are met;
- to grow the capital by having financial returns in excess of the distributions made.

The endowment's capital has risen from \$27.5m (initial allocation) to \$29.5m at the end of 2022, while \$19.8m have been distributed in grants over the same period[1], achieving all three of the endowment's goals.

The Investment Policy of the Fund was revised in Q1-2023, three years after the previous revision. The desired investment objective is a long-term rate of return on assets of 4.5% net, measured in USD and using a total return approach (income as well as capital gains). By long-term, we mean beyond a full business cycle, therefore approximately 8-10 years. When defining the appropriate performance goal, the Board has taken into account a risk tolerance of a 15% loss over a one-year period. The risk measure used is an Expected Shortfall with a 95% confidence interval. Put simply, it means that if we envisage twenty possible scenarios, the worst one should not lead to more than an average 15% loss.

Since inception, the annualised net performance of the endowment has been +4.80% (MW), slightly above the current target. Over the last three years, it has been +5.03% (MW), above the current 4.5% target and slightly above the previous 5% one.

At the end of the year, the endowment was managed through discretionary mandates by Goldman Sachs and Banque Pictet, complemented by investments in PGIM, Blackstone and Aurum Millenium funds.

Since July 2015, Perennium SA is the independent financial advisor of the Fund. Perennium assists with establishing and reviewing investment policy, objectives and guidelines; defining strategic asset allocations; selecting investment options and managers; reviewing such options and managers over time; measuring and evaluating investment performance; and producing consolidated financial reports.

Additional distributions to the benefit of species conservation were made outside of the endowment (directly from donations), to the tune of \$4.2m, bringing the total to \$24m.

MARKETS AND PERFORMANCE IN 2022

After a series of three excellent years for financial markets and for the portfolio (which registered double-digit performances), the year 2022 was exceptionally difficult. The biggest driver of this was much stronger-than-expected inflation, which hit multi-decade highs and led central banks to embark on their most aggressive tightening cycle in a generation. In the meantime, investors also had to grapple with geopolitical turmoil, since Russia's invasion of Ukraine led to massive spikes in energy and food prices that particularly hit emerging market economies.

Financial markets fell across the board, and this included both equities (worst annual performance for the S&P500 index since the GFC in 2008) as well as bonds (worst annual performance for the Bloomberg US Treasury index since data begins in 1973). The exceptional pattern of 2022 was this conjunction of the fall in equities and in bonds, the worst in combined magnitude since 1928.

Against this backdrop, the MBZF portfolio proved very resilient (owing to the changes implemented since 2016), limiting its losses to -6.1%. By ways of comparison, the average balanced USD portfolio registered -14.4% in 2022. A three-year comparison is even more striking: from 2020 to 2022, the MBZF portfolio is at +5.0% annualized vs +0.3% for the average balanced USD portfolio.

The "traditional" portfolio (equities and fixed income) managed by Goldman Sachs delivered -12.9% while the part of the "alternative" portfolio (private equity, hedge funds and real estate) managed by Banque Pictet and the MBFZ directly delivered +1.2%.

THE FUTURE: 2022 AND BEYOND

The Investment Policy Statement has been revised during the course of 2022 and will be revised again with the usual three-year frequency.

We have experienced a historical change of regime, after 35-40 years of falling interest rates and tamed inflation (the “Great Moderation”). The massive fiscal stimulus and near-zero interest rates seen during the pandemic have given way to tighter monetary policies and sharply higher bond yields.

While in 2023 the U.S. Federal Reserve and other major central banks have made progress against inflation and policy rates appear close to their peaks, rate cuts may not happen soon. Heading into 2024, inflation risks are skewed to the upside. Energy prices are a concern amid supply-side pressures.

Monetary policy effects typically are felt with a lag, so global economic growth remains at risk. The eurozone already is in recession, and China’s post-pandemic recovery has been disappointing. However, the U.S. economic outlook is more encouraging, as corporations and consumers both have proven less sensitive to higher rates compared with other major global economies. Fiscal stimulus has added further support.

We are not, however, changing our strategic asset allocation purely on the basis of market forecasts, and the investment philosophy of the Fund remains rooted in its three core tenets:

- The understanding that investing is about dealing with uncertainty. Trying to predict short-term market movements is a futile exercise. On the contrary, one must prepare for all eventualities.
- The focus on portfolio resilience, using components having the right level of true diversification (i.e., different behaviours). Portfolio construction is the key element of the investing value chain.
- The choice of a (very) long-term view. A long investment horizon also allows the use of a wider range of financial

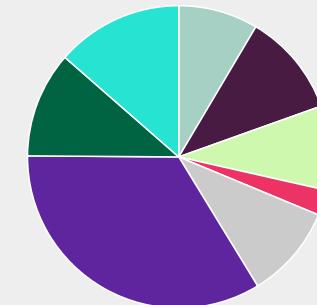

assets and a better connection with the real economy.

DISTRIBUTION OF FUNDS

DISTRIBUTION OF PROCEEDS

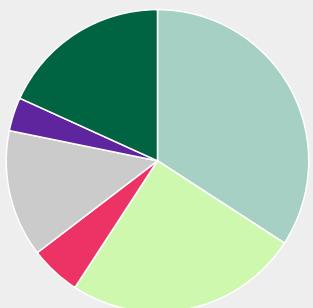

In 2022 the Fund distributed a total of \$1.5 million which supported 179 projects selected from 1,438 grant applications. With restrictions lifted post the Covid pandemic, the Fund were able to support more applicants than in 2021. Another major achievement ensured that the Fund managed to extend their reach by covering an additional 94 species and sub species. The average fund size awarded was \$8,913.92 compared to \$9,056 from funds in 2021.

DISTRIBUTION OF FUNDS BY SPECIES TYPE

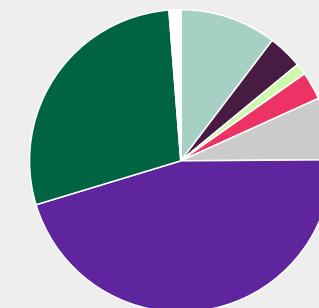

Amphibian	\$135,854
Bird	\$175,950

Extinct in the Wild	\$20,000
Extinct	\$0

The Mohamed bin Zayed Species Conservation Fund remains dedicated to fulfilling the vision of His Highness Sheikh Mohamed bin Zayed Al Nahyan to support species conservation efforts in all their forms across the globe. Inspired by this vision, and the dedication of the many conservationists, researchers and scientists working in the field to assess and protect our most vulnerable flora and fauna, the Fund is committed to preserving the extraordinary biodiversity of Earth for generations to come.
