The Mohamed bin Zayed SPECIES CONSERVATION FUND

ANNUAL REPORT 2023

CELEBRATING CONSERVATION SUCCESS

Over the past 12 months, the Fund has made big gains in conservation that positively impacted endangered species and the dedicated individuals protecting them. From rescuing species on the brink of extinction to rediscoveries, these successes enhance biodiversity and strengthen ecosystem resilience, showcasing our collective commitment to preserving the planet's natural heritage.

Share on:

FOREWORD

As I reflect on the accomplishments and strides made in species conservation, it is my pleasure to introduce the 2023 Annual Report of the Mohamed bin Zayed Species Conservation Fund, themed 'Celebrating Conservation Successes.' This theme is a testament to the impactful work being done globally, supported by our commitment to providing targeted financial assistance to direct species conservation project worldwide. These grants, often modest but pivotal, empower conservationists working tirelessly to protect some of the most endangered species on our planet—species that are frequently uncharismatic and even overlooked.

At the core of our mission is the belief that every species matters, as each grant from the Mohamed Bin Zayed Fund supports efforts to stabilize and recover critical populations, reinforcing the interconnected web of life on Earth. These species are essential for maintaining ecological balance. COP28 (United Nations Climate Change Conference), held in December 2023, where nations agreed to stop deforestation by 2030, was a watershed moment that recognized the importance of nature to climate solutions. While our grants may not directly address global policy changes, they serve as an important model that works to protect nature and biodiversity, subsequently supporting broader climate solutions. Our grants empower local conservationists whose passion and regional expertise are vital for success, emphasizing our reliance on nature and species conservation to safeguard our planet's rich heritage for future generations.

This year's report highlights remarkable stories of resilience and recovery. Through focused financial support, we have seen firsthand how dedicated conservation efforts can reverse the fortunes of species, many of which are at the brink of extinction. These successes are not only victories for biodiversity but also bolster broader environmental stability, contributing to climate change mitigation and enhancing community health and wellbeing.

Looking forward, the challenges remain significant, but the stories of success we celebrate today reinforce our resolve. Each grant, each project we support, is a step towards a richer, more vibrant planet. Together, through continued collaboration and unwavering commitment to conservation, we can extend this impact. Protecting nature is ultimately about protecting ourselves—ensuring a healthier, more sustainable future for all. I invite you to join us in this vital endeavor, as we continue to champion the cause of species conservation and build on our successes for years to come.

**Razan Al Mubarak,
Managing Director**

ABOUT US

The Mohamed bin Zayed Species Conservation Fund seeks to empower species conservation efforts and programmes globally, embodying the deep-rooted commitment of both the government and the people of Abu Dhabi to preserve our natural heritage.

BY PRESERVING AND PROTECTING ENDANGERED SPECIES, WE NOT ONLY SAFEGUARD BIODIVERSITY BUT ALSO ENSURE THE SUSTAINABILITY OF OUR NATURAL RESOURCES, THE STABILITY OF ECOSYSTEMS, AND THE WELL-BEING OF ALL LIVING BEINGS, INCLUDING HUMANS.

Of the estimated 13-14 million species on Earth, only 1.9 million have been described. Alarming, human activity has led to the extinction of 869 species in the past 500 years. The IUCN Red List currently identifies over 163,000 species, with more than 45,300 threatened with extinction, including 41% of amphibians, 37% of sharks and rays, and 36% of reef-building corals.

The alarming statistics from the IUCN Red List highlight the urgent need to recognize the intricate connections between nature, species, and human well-being. The decline of threatened species can disrupt ecological balance, leading to consequences such as reduced pollination, diminished food security, and the collapse of fisheries, all of which are essential for human livelihoods.

Healthy ecosystems provide essential services, such as clean air and water, climate regulation, and natural resources, which directly impact our quality of life. By valuing the interdependence of all living beings, we can ensure a more sustainable relationship with our environment, ensuring that both wildlife and human communities can thrive together.

At the Fund, we are trying to do our bit and have supported over 2800 recipients who have protected over 1,700 species and subspecies, bringing many back from the brink of extinction while discovering new populations and habitats.

This dedicated focus on threatened species makes the Fund unique globally and highly impactful. This number reflects only the minimum species per project supported, making the actual impact even greater. No other funder is as dedicated to supporting threatened species.

Together, let's forge a sustainable future for all species and the communities they sustain. Join us in creating a world where biodiversity thrives, endangered species flourish, and harmony between humans and nature prevails.

SMALL GRANTS

The Mohamed bin Zayed Species Conservation Fund provides financial support in the form of small grants of less than \$25,000 to conservation projects worldwide. These small grants are as much for the species as they are for the conservationists and organizations working so passionately to protect them.

CASE STUDIES

While the Mohamed bin Zayed Species Conservation Fund supports a diverse range of species through direct funding and engagement with multi-partner conservation projects around the world, the species coverage and number of conservationists supported each year by its small grants programme is unparalleled.

The Fund is dedicated to empowering grassroots conservation initiatives that have a significant impact at a local level. Through our small grants program, we prioritise supporting efforts that often go unnoticed, ensuring that even the less charismatic species receive the attention they deserve.

Every species matters and plays a crucial role in the delicate balance of our ecosystems. By engaging with local communities and focusing on species conservation in their natural habitats whilst working hand in hand with nature, we can make a lasting difference. Together, let's protect and celebrate the incredible diversity of life on our planet.

EMPOWERING LOCALS TO BECOME ACTIVE PARTICIPANTS IN CREATING SUSTAINABLE SOLUTIONS

The New Nature Foundation has taken a groundbreaking approach to protect the endangered Ashy Red Colobus monkey, a species native to Uganda's Kibale National Park.

Scientific name: *Piliocolobus tephrosceles*

Common name: Ashy Red Colobus

Species type: Mammal

Country: Uganda

Website:

<https://reports.speciesconservation.org/ar-case-studies/empowering-locals-to-become-active-participants-in-creating-sustainable-solutions/>

MEET THE UNIQUE YET ENDANGERED “BLACK-CHEEKED LIZARD”

The Horton Plains National Park is also home to the endangered Black-Cheek Lizard (*Calotes nigrilabris*).

Scientific name: *Calotes nigrilabris*

Common name: Black-cheek lizard

Species type: Reptile

Country: Sri Lanka

Website: <https://reports.speciesconservation.org/ar-case-studies/meet-the-unique-yet-endangered-black-cheeked-lizard/>

REDISCOVERY AFTER 40 YEARS

The big puma fungus, *Austroomphaliaster nahuelbutensis*, is a mysterious species of underground fungi found in Chile's Nahuelbuta Mountains.

Scientific name: Big Puma Fungus

Common name: *Austroomphaliaster nahuelbutensis*

Species type: Fungi

Country: Chile

Website: <https://reports.speciesconservation.org/ar-case-studies/rediscovery-after-40-years/>

A RAY OF HOPE FOR THE SPINY BUTTERFLY RAY

The spiny butterfly ray, *Gymnura altavela*, is a critically endangered batoid known for its unique body shape, being about twice as wide as it is long.

Scientific name: *Gymnura altavela*

Common name: Spiny butterfly ray

Species type: Fish

Country: Albania

Website: <https://reports.speciesconservation.org/ar-case-studies/a-ray-of-hope-for-the-spiny-butterfly-ray/>

A CRITICALLY ENDANGERED TROPICAL PITCHER PLANT

The characteristic of *N. rigidifolia* lies in its rigid leaves, in addition to a unique pattern and scarlet color in its peristome.

Scientific name: *Nepenthes rigidifolia*

Common name: *Nepenthes rigidifolia*

Species type: Plant

Country: Indonesia

Website:

<https://reports.speciesconservation.org/ar-case-studies/saving-a-critically-endangered-tropical-pitcher-plant-nepenthes-rigidifolia/>

THE FATU HIVA MONARCH, LESS THAN 20 INDIVIDUALS LEFT

The Fatu Hiva Monarch is a bird endemic to French Polynesia and listed as Critically Endangered by the IUCN Red List (less than 20 left).

Scientific name: *Pomarea whitneyi*

Common name: Fatu Hiva monarch

Species type: Bird

Country: French Polynesia

Website: <https://reports.speciesconservation.org/ar-case-studies/4718/>

A photograph of a man and a woman in a lush, green forest. The man, on the left, is wearing a dark blue shirt and is holding a small yellow and blue device, possibly a camera or a sensor, towards the woman. The woman, on the right, is wearing a grey hijab and a grey long-sleeved shirt. She is looking at the device. The background is filled with dense foliage and tree trunks. The text "PARTNER PROJECTS" is overlaid in large, bold, white capital letters.

PARTNER PROJECTS

The Mohamed bin Zayed Species Conservation Fund's partner grants portfolio comprises various conservation initiatives, powered by contributions from partners with philanthropic or impact interests.

MUBADALA INVESTMENT PARTNER PROJECT

MUBADALA SPONSORED PROJECTS

The Mohamed bin Zayed Species Conservation Fund is implementing a three-year partnership with Mubadala, an Abu Dhabi owned sovereign wealth fund, to support conservation globally. The partnership covers a vast geographical area, spanning across five countries and four continents. The partnership supports eleven projects in Colombia, Thailand, Guinea, Indonesia and Canada focusing on species conservation, habitat restoration, community engagement and environmental education.

The loss of wild species and their habitats has severe consequences, disrupting the natural functions that sustain life, fulfill essential needs for people and economies, provide aesthetic values, and shape cultural identities that have developed over centuries. The root cause of this problem lies in the pursuit of growth, bound by the finite nature of our planet.

Species conservation encounters multiple challenges, ranging from a lack of data to loss of habitat.

By partnering, MBZF and Mubadala not only addressed these challenges head-on, but also committed to making a positive impact on both biodiversity and the well-being of the community in global biodiversity hotspots. Together with MBZF collaborators we initiated local solutions to global problems.

PHILANTHROPY

The MBZ Fund manages a portfolio of Abu Dhabi's philanthropic interests related to species conservation that extends across the world and different species.

PANTHERA

The Global Alliance for Wild Cats is an international coalition of the world's leading environmental philanthropists who share an extraordinary vision to preserve global wildlife habitat and biodiversity by protecting the world's wild cats.

Panthera, is creating a world where wild cats thrive in healthy, natural and developed landscapes that sustain people and biodiversity. Through cutting-edge scientific research, strategic species recovery, habitat restoration and collaboration with communities and partners, we're protecting the world's 40 species of wild cats and helping ensure a future for us all.

In partnership with Panthera, the Mohamed bin Zayed Species Conservation Fund on behalf of the Global Alliance for Wild Cats is developing and managing a customized small-grants mechanism, designed to engage with Indigenous organizations to protect biocultural diversity in critical landscapes, and participate actively in the protection of wild cat conservation.

Accomplishments include:

- Formulating a comprehensive strategy to study and conserve the 33 species of small cats.
- 6 million square kilometers of habitat prioritized for the protection through the Jaguar Corridor initiative.
- Seven Counter-Wildlife Crime information hubs around the world.
- 30,000 PantheraCam camera traps have been set to date.
- 2,145 children has been taught the importance of jaguars at

Bornean Clouded Leopard (*Neofelis diardi borneensis*) male with corneal ulcer in his right eye in lowland rainforest, Tawau Hills Park, Sabah, Borneo, Malaysia

Panthera's Jaguar School.

- Building the Tigers Forever Protocol, which has helped tiger populations rebound in key sites across India and Nepal and is turning the tide against poachers in Southeast Asia.
- Forging an extraordinary alliance between six Indigenous tribes and state and national government agencies to preserve pumas and bobcats in Washington State.

Our impact can also be measured by the growth of other local wildlife species, the economic opportunities and benefits our projects provide to local communities, the reduction of incidents of crime and wildlife part trafficking in and around protected areas and the number of people who join our movement. Protecting cats provides a host of ecosystem and community benefits, from the maintenance of key watersheds to the creation of ecosystem industry jobs.

FINANCIALS

The financial reporting of the Mohamed bin Zayed Species Conservation Fund focuses on the performance of its endowment, as well as the reporting of an independent auditor who ensures compliance with financial standards set by the government of Abu Dhabi.

2023 Audited financial statements

ENDOWMENT

The endowment

The Mohamed bin Zayed Species Conservation Fund's endowment was established in April 2009 with an initial allocation of \$27.5 million and has since been managed to ensure the financial sustainability of its small grants program in perpetuity.

The long-term objective of the endowment, as outlined in its Investment Policy Statement is:

- to make annual distributions for the benefit of species conservation, in accordance with the MBZ Fund's spending rule,
- to preserve the capital in US dollars over a 10-year time horizon; and, to the extent that these two objectives are met,
- to grow the capital by having financial returns in excess of the distributions made.

The endowment's capital has increased from \$27.5 million at its inception to \$29.8 million by the end of 2023, while \$21.3 million has been distributed in grants during this period*, successfully achieving all three of its goals.

In Q1-2023, the Fund revised its Investment Policy, aiming for a long-term net return of 4.5%, measured in USD and using a total return approach, on assets over approximately 8-10 years. The Board considered a risk tolerance of a maximum 15% loss over one year, measured using an Expected Shortfall at a 95% confidence interval.

Since inception, the annualised net performance has been +4.89%, exceeding the target, while the last five years have seen a +6.27% annual return.

The endowment is managed through discretionary mandates by Goldman Sachs (equities, fixed income) and Banque Pictet (private equity, hedge funds), along with two self-directed investments in Core/Core+ real estate (PGIM, Blackstone) and one in hedge funds (Aurum Millenium).

** Additional distributions to the benefit of species conservation were made outside of the endowment (directly from donations), to the tune of \$4.2m, bringing the total to \$25.5m.*

Markets and performance in 2023

The year 2023 was marked by significant market events that required careful navigation by investors. The collapse of Silicon Valley Bank in March triggered major upheaval, leading to dramatic shifts in the bond market. By May, enthusiasm for AI spurred a rally in big tech stocks, while summer brought a bond selloff that briefly pushed the 10-year US Treasury yield above 5%. Geopolitical concerns, particularly following Hamas' attack on Israel in October, loomed large. However, an impressive rally emerged in late October as declining inflation raised hopes for a soft landing, further supported in December by the US Federal Reserve's indication of 75 basis points of rate cuts for 2024.

Despite the volatility, most assets performed well in 2023, with the S&P 500 index recording a +26.3% total return, driven by a +107% increase in the "Magnificent Seven" stocks. Bonds returned to positive territory after two years of losses, while European property values struggled due to higher rates. In this context, the MBZF portfolio achieved a +6.23% return, translating to an annualized 6.27% over the past five years, outperforming the average balanced USD portfolio's +4.77% return.

The "conventional" portfolio managed by Goldman Sachs delivered +12.05%, while the "alternative" portfolio managed by Banque Pictet and MBZF directly yielded +3.08%, reflecting the lag in private asset valuations.

** Source: ARC PCI indices, 140 contributing financial institutions across Europe, more than 300'000 portfolios.*

Beyond 2023

The Investment Policy Statement (IPS) had been revised during the course of 2022 (and the next revision took place in H1-2024).

An IPS is typically reviewed every three years; however, the review date was advanced due to a significant capital injection from the Presidential Court, consisting of a \$40 million donation pledge spread over four years. This substantial increase in the endowment size will enable the SCF to award more grants in the future while also allowing for greater diversification, and thus more resilience, within the endowment portfolio.

DISTRIBUTION OF FUNDS

In 2023, the Fund distributed a total of \$1,637,581 which included a generous \$126,813.00 donation from the Small Wild Cat Conservation Foundation (SWCCF) and \$11,000.00 from Advisory Board member Bill Konstant. This support enabled the Fund to back a total of 179 projects, including five Chairman’s Awards, across 64 countries. Notably, the average grant size rose from \$8,913.92 in 2022 to \$10,296.70, largely due to the additional contributions from SWCCF and Bill Konstant.

DISTRIBUTION OF FUNDS BY SPECIES TYPE

DISTRIBUTION OF FUNDS BY CONTINENT

DISTRIBUTION OF FUNDS BY IUCN RED LIST

The Mohamed bin Zayed Species Conservation Fund remains dedicated to fulfilling the vision of His Highness Sheikh Mohamed bin Zayed Al Nahyan to support species conservation efforts in all their forms across the globe. Inspired by this vision, and the dedication of the many conservationists, researchers and scientists working in the field to assess and protect our most vulnerable flora and fauna, the Fund is committed to preserving the extraordinary biodiversity of Earth for generations to come.
