

ANNUAL REPORT 2020

CONSERVATION DURING HUMAN CRISIS

As Covid-19 became more widespread in 2020, its affects on conservation activities were apparent among our grant recipients who were unable to enter the field or lost revenue from dwindling ecotourism. The MBZ Fund took decisive action in 2020 to support these struggling conservation organizations by offering Covid-19 Relief Grants.

FOREWORD

The year started normally. Hardly anyone outside China paid attention to the respiratory illness that was causing severe disease, mass hospitalizations, and state-imposed social distancing; however, within a few months the world had entered a crisis. Businesses were being shuttered. Borders closed. Travel dwindled. Our cities quieted and species conservation activities came to a halt. [A survey of our grant recipients in May 2020](#) revealed that conservation was in crisis, too.

Conservation philanthropy required a new approach. Although the MBZ Fund provided support for direct species conservation activities through June 2020, the Fund changed course for the remainder of 2020 and into 2021 to help supplant small conservation organizations' loss of revenue. The MBZ Fund began providing grants for core costs like rent, utilities and salaries. In this report we highlight some examples of how the MBZ Fund *Covid-19 Relief Grants* provided respite from the punishing loss of revenue experienced by many cherished conservation organizations without whom species conservation would not be possible. While the tragic events of 2020 were devastating, we continue to be impressed with the resilience of nature and the conservation organizations working so passionately to protect it.

RAZAN AL MUBARAK
MANAGING DIRECTOR

Marvelous Spatuletail ©Owen Deutsch

A photograph of a damselfly resting on a mossy rock in a forest stream. The damselfly is dark with yellow markings on its abdomen. The surrounding environment is lush with green moss and ferns. The water is calm, reflecting the surrounding foliage.

ABOUT US

The Mohamed bin Zayed Species Conservation Fund seeks to empower species conservation efforts and programmes across the globe, embodying the deep-rooted commitment of both the government and the people of Abu Dhabi to the preservation of our natural heritage.

WHY SPECIES CONSERVATION?

Species-level conservation today does not enjoy the same prominence in the environmental/conservation sphere as it once did. Many of the original global conservation organisations were established with a strong species focus, but over time much of the emphasis and funding has moved to other environmental priorities and grown in scope to include other disciplines.

Whereas the primary activities of species conservationists (many of whom were originally hunters, animal lovers or simply enthusiastic amateur naturalists) involved weeks and months in the field, a significant portion of conservation today takes the form of lab work, or conservation planning and analysis conducted in offices. Whilst these are all pursuits that are vital to the goals of global conservation, the decline of field-based species conservation as a discipline within the evolving environmental movement is an alarming trend that must be resisted.

Batagur baska (India) ©Shaileendra Singh

HOW DID COVID-19 AFFECT THE FUND?

The effects of Covid-19 were being strongly felt by Spring 2020. Countries in Europe and North America were more affected by the virus than countries on other continents; however, the measures to reduce the spread of the virus, such as social distancing and travel restrictions, were becoming commonplace.

In May 2020, the MBZ Fund surveyed its grant recipients to better understand how these prevention measures were affecting them. The survey ([Click Here to Read the Report](#)) found the pandemic had affected the ability of 83 percent of conservationists to conduct critical fieldwork, while 70 percent said their planned conservation activities had been canceled or postponed. Many organisations reported loss of revenue due to closures of parks, zoos, aquariums, and a severe decline in ecotourism.

As a relief measure for conservation organisations experiencing significant financial losses because of the pandemic, the MBZ Fund temporarily switched its focus from funding direct species conservation activities to helping support core costs, such as rent, utilities, and/or salaries. This change in focus would apply to applications received between 1 July and 31 October, as well as those received between 1 November and 28 February 2021. After this, the MBZ Fund would go back to prioritizing support for direct conservation action.

The background of the entire page is a close-up photograph of numerous young plants in a nursery. The plants have bright green, serrated leaves and are growing in dark, moist soil. The lighting is natural, highlighting the texture of the leaves and the density of the growth.

SMALL GRANTS

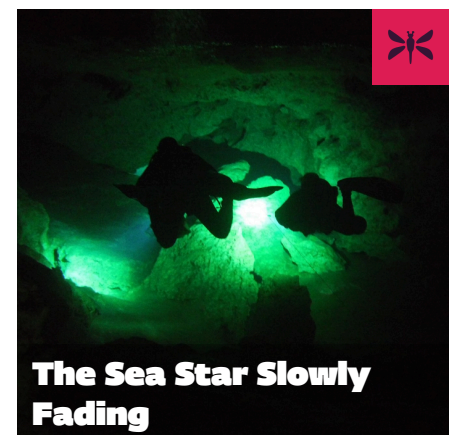

The Mohamed bin Zayed Species Conservation Fund provides financial support in the form of small grants of less than \$25,000 to conservation projects worldwide. The small grants programme is as much for the species as the conservationists and organisations working passionately to protect them.

CASE STUDIES

While the Mohamed bin Zayed Species Conservation Fund supports a diverse range of species through direct funding and engagement with multi-partner conservation projects around the world, the species coverage and number of conservationists supported each year by its small grants programme is unparalleled.

Thousands of these small-scale species conservation projects have reached all corners of the globe, from Argentina to Vietnam, offering targeted support to enthusiastic conservationists and researchers in the field.

These intrepid individuals and organisations are the first line of defence against species extinction – passionate people who have dedicated their lives to the conservation of the creatures and plants they love and we depend on to retain our planet's unique biodiversity.

THE GUARDIANS STARRY NIGHT OVER COLOMBIA

Ensuring the conservation of the threatened Starry Night Harlequin toads (*Atelopus*) in the Key Biodiversity Area Sierra Nevada de Santa Marta, Colombia.

Scientific name: *Atelopus arsyecue*

Common name: Starry Night Harlequin Toad

Species type: Amphibian

Country: Colombia

Website: <https://reports.speciesconservation.org/ar-case-studies/the-sacred-guardians-starring-the-forest/>

STEPPING BACK TO SAFETY

Conservation of the Steppe Eagle breeding population in the Altai-Sayan Ecoregion, Russia.

Scientific name: *Aquila nipalensis*

Common name: Steppe Eagle

Species type: Bird

Country: Russia

Website: <https://reports.speciesconservation.org/ar-case-studies/stepping-back-to-safety/>

KEEPING RESEARCH ISLAND AFLOAT

Subsidising core operational costs for long-term species conservation objectives, invasive species management and novel environmental education initiatives on Utila

Scientific name: *Ctenosaura bakeri* and *Anolis bicaorum*

Common name: Utila Spiny-tailed Iguana and Bica Anole

Species type: Reptile

Country: Honduras

Website: <https://reports.speciesconservation.org/ar-case-studies/keeping-afloat-on-the-island-of-conservation/>

THE FALL OF THE MIGHTY MAHSEER

Community-based conservation of the Critically Endangered Wayanad Mahseer, *Neolissochilus wynaadensis* in the Western Ghats.

Scientific name: *Neolissochilus wynaadensis*

Common name: Wayanad Mahseer

Species type: Fish

Country: India

Website: <https://reports.speciesconservation.org/ar-case-studies/the-fall-of-the-mighty-mahseer/>

FISHING FOR WATER CATS

Investigating the distribution and threats to the Fishing cat (*Prionailurus viverrinus*) in the Sindh, Balochistan and Punjab provinces of Pakistan

Scientific name: *Prionailurus viverrinus*

Common name: Fishing cat

Species type: Mammal

Country: Pakistan

Website: <https://reports.speciesconservation.org/ar-case-studies/fishing-for-water-cats/>

THE SEA STAR SLOWLY FADING

Conservation status of the micro-endemic echinoderm species inhabiting a subterranean estuary in Cozumel, Mexico

Scientific name: *Copidaster cavernicola*

Common name: Cozumel's cave sea star

Species type: Invertebrate

Country: Mexico

Website: <https://reports.speciesconservation.org/ar-case-studies/the-sea-star-slowly-fading/>

A photograph of a rocky stream bed with moss, a green net, and a backpack. The scene is a natural, outdoor environment with a stream flowing over a bed of small, reddish-brown rocks. The banks are covered in lush green moss. A green net is lying on the moss on the left side. A dark blue backpack with orange accents is open and lying on the rocks in the foreground. The text "PARTNER PROJECTS" is overlaid in large, bold, white capital letters in the center of the image.

PARTNER PROJECTS

Mubadala Investment Company, the Abu Dhabi-based sovereign investor, entered a three-year partnership with the MBZ Fund to support conservation initiatives around the world. Through the partnership, Mubadala Investment Company will provide the MBZ Fund with US \$1.5 million annually to be directed towards supporting endangered flora and fauna in Africa, Asia and South America.

MUBADALA INVESTMENT COMPANY GRANTS

MUBADALA

LARGE PROJECTS, SPONSORED BY MUBADALA

Mubadala Investment Company, the Abu Dhabi-based sovereign investor, has entered a three-year partnership with the Mohamed bin Zayed Species Conservation Fund to support conservation initiatives around the world.

Through the partnership, Mubadala Investment Company will provide the MBZ Fund with US \$1.5 million annually to be directed towards supporting endangered flora and fauna in Africa, Asia and South America; particularly in countries where Mubadala Investment Company has portfolio companies including Colombia, Guinea, Indonesia, Thailand – representing some of the world’s biodiversity hotspots.

These grants, while larger in scope and longer in duration than the traditional MBZ Fund small grants programme, complement the Fund’s already significant support for species conservation globally, and the Fund’s policy of supporting hands on, field conservation activities. These “Mubadala Grants” are implemented by our trusted and experienced local conservation partners, supported by Mubadala and its assets, and managed by the Mohamed bin Zayed Species Conservation Fund. All the partners in this effort are dedicated to conserving the species that form the building blocks of life on earth and by applying their passions for conservation will help turn the tides against the extinction crisis.

PHILANTHROPY

The MBZ Fund manages a portfolio of Abu Dhabi's philanthropic interests related to species conservation that extends across the world and across different species.

PANTHERA

SUPPORTING PANTHERA AND GLOBAL WILD CAT CONSERVATION

Through its international partnerships, the Mohamed bin Zayed Species Conservation Fund seeks to support major efforts to ensure the wellbeing of species under threat across the globe. One such example is the Fund's strong and ongoing support for Panthera – the only organisation that is devoted exclusively to the conservation of the world's 40 wild cat species and their ecosystems.

Powered by the expertise of the world's premier cat biologists, Panthera develops and implements conservation strategies for large cats – including Cheetahs, Jaguars, Leopards, Lions, Pumas, Snow leopards and Tigers – as well as for the world's most threatened small cat species. Panthera's activities include the following major programmes.

Mapping the future of the Jaguar in the Americas

This bold, regionally-focused initiative will pave the way for further international cooperation and awareness regarding Jaguar protection initiatives.

Ending poaching in Africa

In southern Africa, Panthera has made great progress in reducing intensive poaching of Cheetahs, Leopards, Lions and their prey in Kafue National Park, Zambia, and Limpopo National Park, Mozambique. Panthera also supports anti-poaching efforts in Gabon's Batéké Plateau National Park.

Lion Cubs © Panthera

Tigers on the rebound in South Asia

Thanks to intensive protection and innovative community programs initiated at Panthera's 'Tigers Forever' sites in India and Nepal, survey results released in 2018 showed that Tigers are bouncing back, providing hope for their recovery in other areas, too.

Saving Snow Leopards with Tourism in India

In Ladakh, northern India, Panthera works with the Snow Leopard Conservancy-India Trust to improve local livelihoods and transform the image of Snow leopards from livestock killers to valuable assets.

FINANCIALS

The financial reporting of the Mohamed bin Zayed Species Conservation Fund focuses on the performance of its endowment, as well as the reporting of an independent auditor who ensures compliance with financial standards set by the government of Abu Dhabi.

THE ENDOWMENT

The endowment of the Mohamed bin Zayed Species Conservation Fund was created in April 2009, with an initial allocation of \$27.5m. Since then, it has been managed in such a way as to provide for the financial needs of the small grants programme in perpetuity.

The long-term objective of the endowment, as described in its Investment Policy Statement, is:

1. to make annual distributions for the benefit of species conservation, in accordance with the MBZ Fund's spending rule;
2. to preserve the capital in US dollars over a 10-year time horizon; and, to the extent that these two objectives are met;
3. to grow the capital by having financial returns in excess of the distributions made.

The endowment's capital has risen from \$27.5m (initial allocation) to \$31.1m at the end of 2020, while \$16.7m have been distributed in grants over the same period, achieving all three of the endowment's goals.

Distributions for 2020 were actually \$1.5m but the last \$0.1m were taken from the endowment bank account in January 2021, after the reporting period; and at the beginning of the reporting period, there were \$0.5m of withdrawals linked to 2019.

The Fund's Investment Policy targets a long-term rate of return on assets of 5% net, measured in USD and using a total return approach (income as well as capital gains). Since inception, the annualised net performance of the endowment has been +5.2% (MW), in line with the target.

During the year 2020, the Microfinance bucket continued to be reduced when liquidity was needed for Private Equity capital calls. The Private Debt bucket and the Hedge Fund bucket were progressively merged, to increase the investment universe. In September, after the first three full years of the Goldman Sachs mandate, the Equities bucket managed by the bank was completely revamped, in order to optimize performance.

At the end of the year, the endowment was managed by Goldman Sachs, Banque Pictet, Oaktree Capital (Private Debt) and PGIM (Real Estate).

MARKETS AND PERFORMANCE IN 2020

2020 proved to be a tumultuous year for global financial markets, with the coronavirus pandemic and the subsequent policy responses leading to major swings in asset prices. By late February, as it became clear that the pandemic was not going to be contained within China, markets saw some of the biggest sell-offs since the global financial crisis, as lockdowns led to shuttered businesses and people were forced to adapt to a new way of living. But although the pandemic and ensuing global recession could have proved a disaster for markets, the unprecedented fiscal and monetary stimulus that was unleashed helped to support a strong recovery in asset prices.

In this context, the MBZ Fund portfolio delivered a net performance of +10.9% (MW). The “traditional” portfolio (equities and fixed income) managed by Goldman Sachs delivered +11.5% while the “alternative” portfolio (private equity, private debt, hedge funds and real estate) mostly managed by Banque Pictet delivered +12.0%.

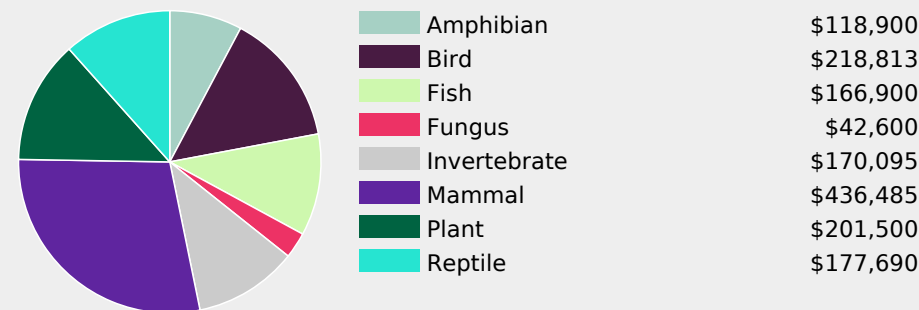

It is worth noting that the Private Equity bucket (managed by Banque Pictet) achieved a record +36.2% net annualized IRR from inception to end 2020.

DISTRIBUTION OF FUNDS

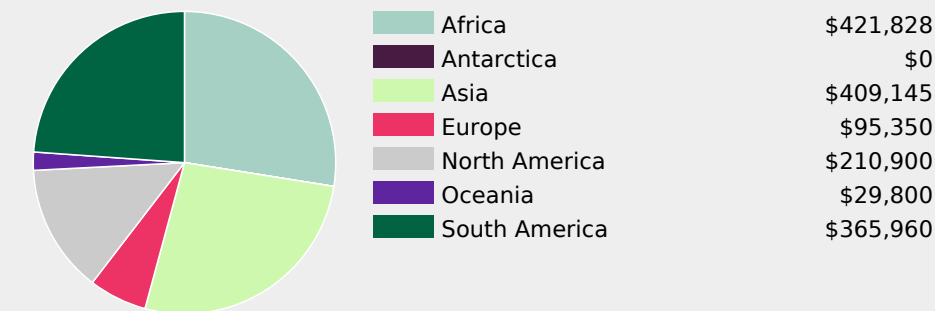

DISTRIBUTION OF PROCEEDS

In 2020 the Fund supported 145 projects selected from 1,792 grant applications. There were fewer grants in 2020 compared to years past because the final round of grant giving in 2020 was dedicated to our ‘Covid-19 Relief Grants’ which helped conservation organizations pay for core costs (salary, utilities, rent, etc.) during the pandemic.

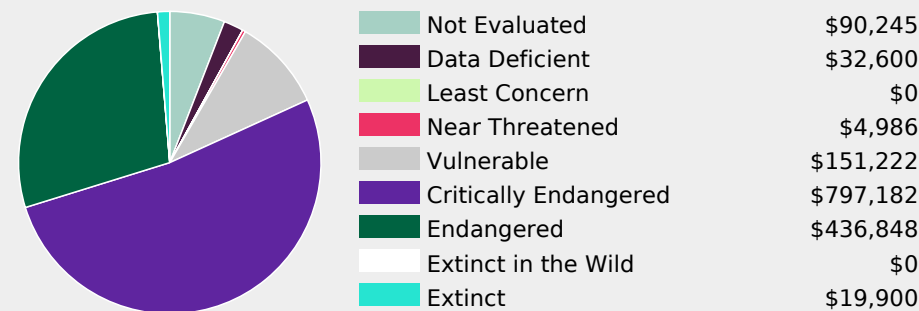

DISTRIBUTION OF FUNDS BY SPECIES TYPE

DISTRIBUTION OF FUNDS BY CONTINENT

DISTRIBUTION OF FUNDS BY IUCN RED LIST

The Mohamed bin Zayed Species Conservation Fund remains dedicated to fulfilling the vision of His Highness General Sheikh Mohamed bin Zayed Al Nahyan to support species conservation efforts in all their forms across the globe. Inspired by this vision, and the dedication of the many conservationists, researchers and scientists working in the field to assess and protect our most vulnerable flora and fauna, the Fund is committed to preserving the extraordinary biodiversity of Earth for generations to come.
